

md:complex^{GenX}

Exosomes & Polynucleotides^{Regen}

Cell^{Switch} technology for signalling skin regeneration and rejuvenation processes.

Regenerative Medicine: crossing the frontier to advanced aesthetic innovation

As the body ages, intracellular communication, and the body's powers of regeneration decline, which is why the effects of ageing become more pronounced. Regenerative medicine unveils breakthroughs that may revolutionize skincare as we know it. Innovative techniques, such as exosome therapy, polynucleotides, stem cells and growth factors, roll back the effects of age by stimulating the skin's natural healing mechanisms, promoting the regeneration of healthy tissues and the restoration of a youthful complexion.

Exosomes are extracellular nano-sized vesicles produced from within the cells, that transport essential cargo of lipids, proteins, genetic material, growth factors, cytokines, antioxidants and metabolites required for cell-to-cell communication.

When **md:complex^{GenX} Exosomes & Polynucleotides^{Regen}** is applied to the skin, billions of exosomes target damaged cells, directly repairing them. The synergistic effect of polynucleotides uses the power of cellular intelligence to reverse the ageing of tissues and bring the intracellular matrix back to a younger state.

md:complex^{GenX} Exosomes & Polynucleotides^{Regen} Cell^{Switch} technology for skin regeneration and rejuvenation

COMPOSITION:

Centella Asiatica Extract Exosomes + Sodium DNA + Hydrolyzed DNA & RNA + Sodium Hyaluronate + Rosa Centifolia Leaf Cell Extract + Centaurea Cyanus Callus Lysate Extract + Panthenol

md:complex^{GenX} Exosomes & Polynucleotides^{Regen} formulation combines the cell-signalling power of exosomes, polynucleotides, stem cells and growth factors with the firming and hydrating effect of hyaluronic acid, which all work together to stimulate tissue repair and encourage restoration and regeneration of the skin from within. It works by signalling to cells to change their behaviour and start processes of regeneration, repair, and collagen production, preventing chronological ageing. It improves elasticity and hydration, visibly reduce wrinkles, calms inflammation and rebalances melanocyte activity to create an even, glowing, and refreshed skin tone.

Box
5 vials
of 7ml /
0.24 fl. oz.

7ml / 0.24 fl. oz.

BENEFITS

- Improves cell-to-cell communication, improving cells' health. They transmit regenerative signals deep within skin cells, activating renewal processes.
- Enhances collagen and elastin regeneration and reverses fibroblast senescence, leading to the improved appearance of fine lines and wrinkles.
- Accelerates wound healing, repairing skin damage caused by environmental factors or the natural aging process.
- Modulates the immune system to reduce inflammation. Regulates oxidative stress, protecting the skin from premature skin ageing.
- Plumps and hydrates the skin, improving its texture. It attracts and binds water, helping to increase skin hydration and maintain its volume and turgidity.
- Stimulates neo angiogenesis and blood flow, ensuring optimal oxygenation and nutrition of tissues and increasing cutaneous brightness and glow.
- Blocks melanin production, leading to an even tone. Protects the skin from environmental stressors and reduces the appearance of dark spots and other discoloration.

md:complex^{GenX} Exosomes & Polynucleotides^{Regen}

crosses the Frontier to Advanced Aesthetic Innovation, switching on cellular vitality for a more elastic, plumped and radiant skin.

CLINICALLY PROVEN RESULTS
